

Overview

A modular control pack for underfloor heating systems. Designed to be lightweight and compact to connect directly onto a standard UFH manifold without the need for extra brackets or support. The control pack consists of a mixing valve, 14 kw circulating pump, connection elbows, manifold adaptors, and all necessary seals.

The control pack is supplied unassembled and by default is set for assembly on the left side of the manifold, a brass fitting is supplied that can be used to reverse the connections on the blending valve to suit a right-side manifold orientation.

Specification & Technical Details

- Provides controlled mixed temperature water to underfloor heating systems with a heat output up to 14kW
- Used in conjunction with 2-12 port manifolds
- Compact bolt on unit providing quick and simple installation
- Easy set up within the adjustable range of 35°C to 65°C
- Controls flow temperature to +/- 2°C even with changing boiler flow and return temperatures
- ¾" flow and return connections
- Manufactured to BS EN 1264-4
